This report has been prepared in accordance with the brief provided by Acciona Samsung Bouygues Joint Venture and has relied upon the information collected at the time and under the conditions specified in the report. All findings, conclusions or recommendations contained in the report are based on the aforementioned circumstances. The report is for the use of Acciona Samsung Bouygues Joint Venture and no responsibility will be taken for its use by other parties. Acciona Samsung Bouygues Joint Venture may, at its discretion, use the report to inform regulators and the public.

Reproduction of this report for resale or other commercial purposes is prohibited without EMM's prior written permission.

Executive Summary

EMM Consulting Pty Limited has completed a construction noise and vibration impact statement (CNVIS) to review potential noise and vibration impacts from the demobilisation of the Pyrmont Bridge Road tunnel site at Camperdown.

The Site will be extensively mitigated and managed to reduce noise emissions. The mitigation and management applied at site satisfies the feasible and reasonable approach as outlined in the ICNG (EPA 2009) and the requirements of the conditions of approval (CoA).

This CNVIS assesses noise levels from the following stages:

- Stage 1 – Worst case scenario for tunnel backfilling inside acoustic shed, vent building removal and site office setup outside acoustic shed.
- Stages 2-5 – Worst case site demobilisation activities including removal of the acoustic shed, removal of site fixtures, site clearing and concreting.

All proposed works are for standard daytime construction hours only, with no out-of-hours works proposed.

Consistent with the EIS, all stages of the demobilisation have predicted exceedances of NMLs at multiple receiver locations. Stage 3 predictions indicate the potential for the highest number of locations to exceed NMLs, with 72 predicted exceedances and two predictions that exceed the ICNG's highly affected noise level of 75 dB. Stage 3 also has one exceedance in the 20 dB and greater category. This is due to the demolition works that will take place in Stage 3 that must happen after the acoustic shed has been removed. All other stages are predicted to have significantly less impact.

When comparing the EIS impacts to this CNVIS's Stage 3, 30 more receivers were predicted to be impacted in the EIS assessment. Nevertheless, all works are proposed to be completed during standard daytime hours only and will be for a limited period of time.

The Site will not operate during the night-time period (10pm to 7am). Therefore, the assessment of potential sleep disturbance at residences is not required.

An assessment of construction vibration was conducted, with a number of premises inside safe working distances noted. Construction management and mitigation measures are recommended.

Additional mitigation measures in line with the CNVG have been recommended for each stage assessed.

1 Introduction

1.1 Context

This Construction Noise and Vibration Impact Statement (CNVIS) has been prepared to identify the noise and vibration impacts from a portion of Stage 1 of the WestConnex 3A – M4-M5 Link Mainline tunnels project (the Project). In addition, this CNVIS also responds to (as required) the various noise and vibration requirements detailed within the Minister's Conditions of Approval (CoA), the WestConnex M4-M5 Link Environmental Impact Statement (EIS), the revised environmental management measures (REMM) listed in the Submissions and Preferred Infrastructure Report (SPIR) and all applicable legislation.

1.2 Background and project description

An EIS (AECOM 2017) assessed the potential impacts of construction and operation of the project on noise and vibration, within Chapter 10.

The EIS identified the potential noise impacts during the 24/7 operations phase of the tunnelling support facilities. It concluded any potential impacts could be managed by standard mitigation and management measures.

The WestConnex M4-M5 Link project is being constructed in two stages (refer to Figure 1.1):

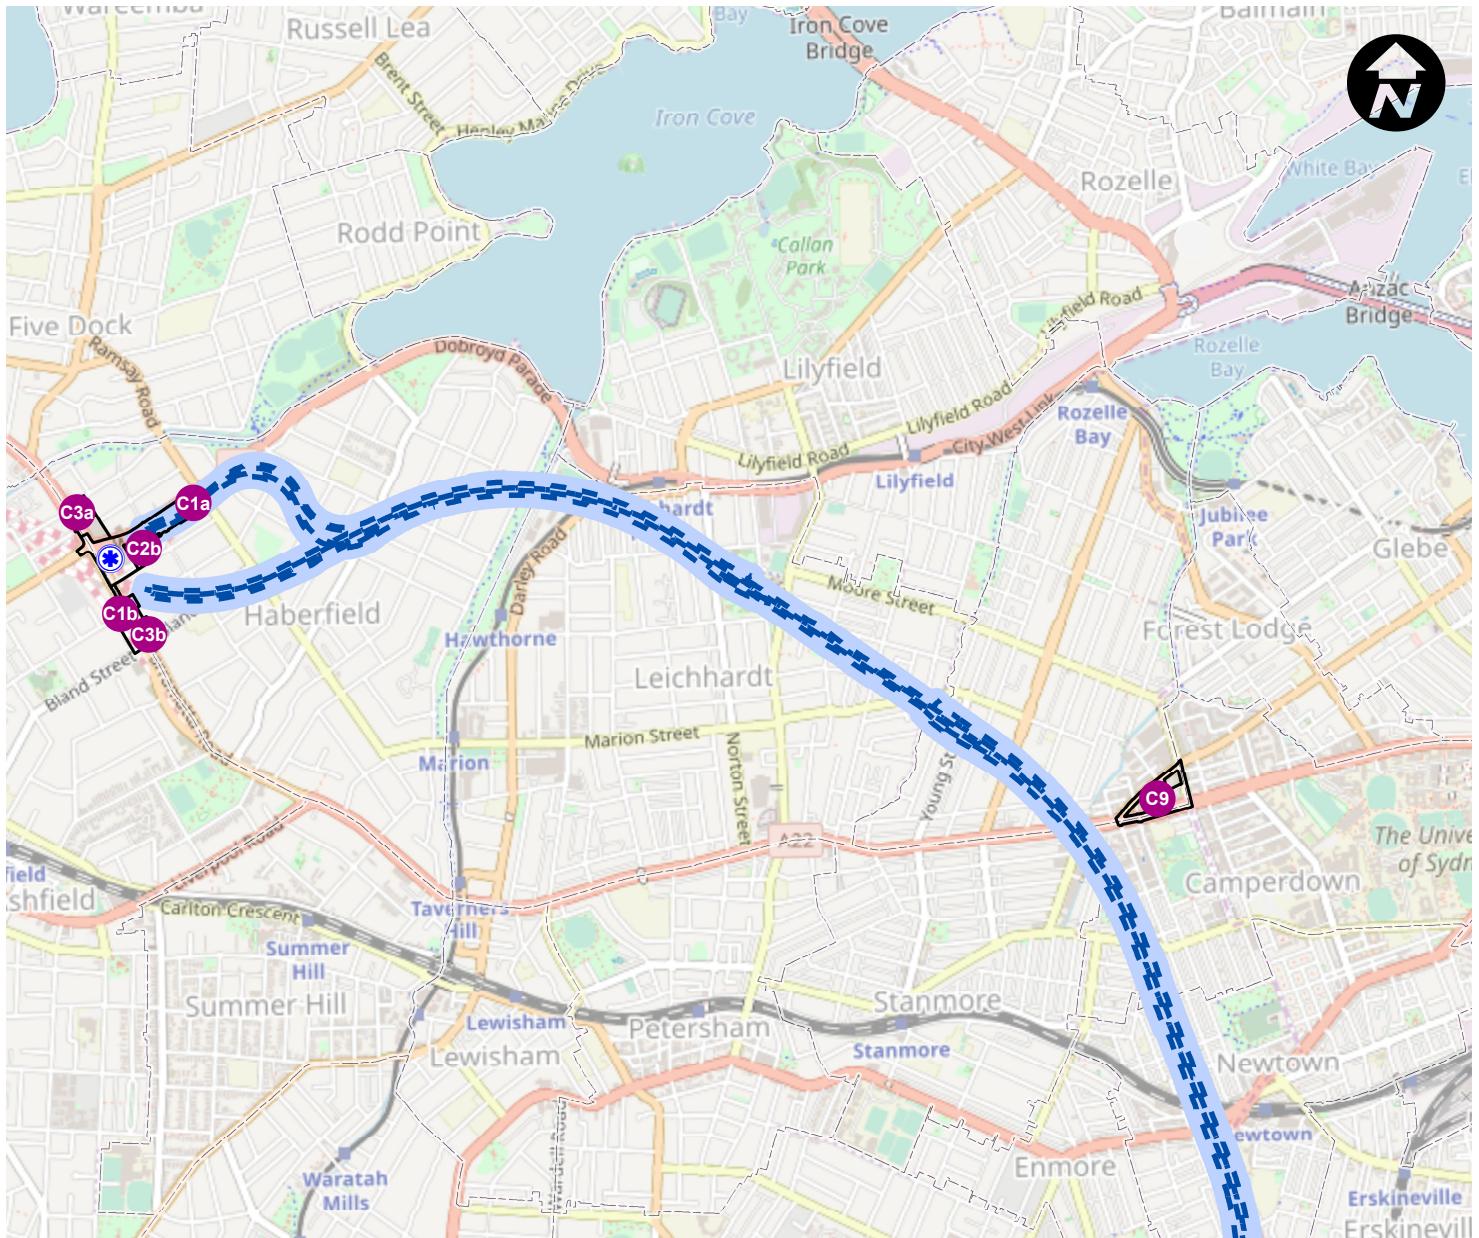

- Stage 1 (the Project and subject of this document): M4-M5 Link Mainline tunnels.
- Stage 2: Rozelle interchange.

WestConnex Transurban has engaged Acciona Samsung Bouygues Joint Venture (ASBVJ) to design and construct Stage 1 of the project (refer Figure 1.1). The key features of the Mainline tunnels project include:

- twin mainline motorway tunnels between the M4 East at Haberfield and the New M5 at St Peters. Each tunnel would be around 7.5 kilometres (km) long and would generally accommodate up to four lanes of traffic in each direction;
- connections of the mainline tunnels to the M4 East project, comprising:
 - a tunnel-to-tunnel connection to the M4 East mainline stub tunnels east of Parramatta Road near Alt Street at Haberfield;
 - entry and exit ramp connections between the mainline tunnels and the Wattle Street interchange at Haberfield (constructed as part of the M4 East project); and
 - minor physical integration works with the surface road network at the Wattle Street interchange including road pavement and line marking;
- connections of the mainline tunnels to the New M5 project, comprising:
 - a tunnel-to-tunnel connection to the New M5 mainline stub tunnels north of the Princes Highway near the intersection of Mary Street and Bakers Lane at St Peters;
 - entry and exit ramp connections between the mainline tunnels and the St Peters interchange at St Peters (which is currently being constructed as part of the New M5 project); and
 - minor physical integration works with the surface road network at the St Peters interchange including road pavement and line marking;

- construction of tunnel stubs to provide for future underground connection of the mainline tunnels to the Rozelle interchange and Iron Cove Link;
- a motorway operations complex at St Peters (Campbell Road) (MOC5). The types of facilities that would be contained within the motorway operations complexes would include substations, water treatment plants, ventilation facilities and outlets (the Campbell Road ventilation facility), offices, on-site storage and parking for employees;
- tunnel ventilation systems, including ventilation supply and exhaust facilities, ventilation fans, ventilation outlets and ventilation tunnels;
- fitout (mechanical and electrical) of part of the Parramatta Road ventilation facility at Haberfield (constructed as part of M4 East project) for use by the M4-M5 Link project;
- drainage infrastructure to collect surface and groundwater for treatment at dedicated facilities;
- water treatment would occur at the operational water treatment facility at the Campbell Road motorway operations complex;
- ancillary infrastructure and operational facilities for electronic tolling and traffic control and signage (including electronic signage);
- emergency access and evacuation facilities, including pedestrian and vehicular cross and long passages and fire and life safety systems;
- utility works, including protection and/or adjustment of existing utilities, removal of redundant utilities and installation of new utilities;
- temporary construction ancillary facilities to facilitate construction of the project at the following locations:
 - Northcote Street civil and tunnel site, Haberfield;
 - Parramatta Road East civil site, Haberfield;
 - Parramatta Road West civil site, Ashfield;
 - Wattle Street civil and tunnel site, Haberfield;
 - Pyrmont Bridge Road tunnel site, Camperdown/Annandale; and
 - Campbell Road civil and tunnel site, St Peters.

An overview of the project footprint and ancillary facilities is presented in the Construction Environmental Management Plan (CEMP). Further detail of the project description is presented in Section 1.3 of the CEMP.

1.3 Scope of this CNVIS

The scope of this CNVIS is to assess potential noise impacts from construction scenarios which represent typical worst case noise levels from the use of the Pyrmont Bridge Road tunnel site at Camperdown. The proposed activities at this site assessed in this CNVIS include:

- Tunnel backfill (Stage 1)
 - tunnel backfilling inside acoustic shed; and
 - ventilation building removal and site office setup outside acoustic shed.
- Site demobilisation (Stages 2-5)
 - removal of the acoustic shed;
 - removal of site fixtures; and
 - site clearing and concreting.

The purpose of the CNVIS is to identify potential noise and vibration impacts and to develop feasible and reasonable noise management and mitigation measures where potential impacts are identified.

1.4 Environmental management systems overview

The environmental management system overview is described in Section 1.5 of the CEMP. Noise and vibration impacts are managed through the implementation of the Noise and Vibration Management Plan (NVMP) as required by CoA C4 (b).

2 Purpose and objectives

The key objective of the CNVIS is to ensure all CoA, REMM and licence/permit requirements relevant to noise and vibration are described, scheduled and assigned responsibility as outlined in:

- the EIS prepared for WestConnex M4-M5 Link;
- the submissions report prepared for WestConnex M4-M5 Link;
- Conditions of Approval granted to the project on 17 April 2018 and updated on 25 February 2019;
- Roads and Maritime specifications G36;
- WestConnex M4-M5 Link Mainline Tunnel Modification report (September 2018);
- WestConnex M4-M5 Link Mainline Tunnel Modification Response to Submissions (November 2018); and
- the Project's Environmental Protection Licence (EPL).

All relevant legislation and other requirements described in Section 3 of this report.

3 Environmental requirements

3.1 Legislation

This CNVIS has been prepared in accordance with:

- *Environmental Planning and Assessment Act 1979*; and
- *Protection of the Environment Operations Act 1997* (POEO Act).

3.2 Guidelines

The following guidelines apply to project related construction noise and vibration:

- NSW Industrial Noise Policy (INP) 2000, Environmental Protection Authority¹;
- NSW Interim Construction Noise Guideline (ICNG) 2009, Department of Environment and Climate Change;
- NSW Road Noise Policy, Department of Environment 2011, Climate Change and Water;
- NSW Assessing Vibration – a technical guideline (AVTG) 2006, Department of Environment and Conservation;
- NSW Noise Criteria Guideline (NCG) 2015, Roads and Maritime Services;
- NSW Noise Mitigation Guideline (NMG) 2015, Roads and Maritime Services;
- Construction noise and vibration guideline (CNVG) 2016, Roads and Maritime Services;
- Australian Standard AS/NZS 2107:2000 ‘Acoustics - Recommended design sound levels and reverberation times for building interiors’;
- Australian Standard 2834-1995 Computer Accommodation, Chapter 2.9 Vibration;
- Australian Standard AS 2187.2 ‘Explosives - Storage and use - Part 2 Use of explosives’;
- Australian Standard AS2436-1981 ‘Guide to Noise Control on Construction, Maintenance and Demolition Sites’;
- British Standard BS 6472-2008, ‘Evaluation of human exposure to vibration in buildings (1-80Hz)’;
- British Standard 7385: Part 2-1993 'Evaluation and measurement of vibration in buildings';
- German Standard DIN4150-1999 'Structural vibration Part 3: Effects of vibration on Structures';
- Construction Noise Strategy 7TP-ST-157/2.0 (CNS) 2012, Transport for NSW; and
- Environmental Noise Management Manual (ENMM) 2001, Roads and Traffic Authority.

¹ This document has since been superseded by the NSW Noise Policy for Industry (NPfI) 2017. However, the INP remains the relevant policy in accordance with the project's Instrument of Approval and NPfI transitional requirements.

3.3 Conditions of approval

The CoA relevant to this CNVIS are listed in Table 3.1.

Table 3.1 Conditions of Approval for construction noise and vibration

Condition	Key requirement
Land Use Survey	
E66	A detailed land use survey must be undertaken to confirm sensitive receivers (including critical working areas such as operating theatres and precision laboratories) potentially exposed to construction noise and vibration, construction ground-borne noise and operational noise. The survey may be undertaken on a progressive basis but must be undertaken in any one area prior to the commencement of works which generate construction or operational noise, vibration or ground-borne noise in that area. The results of the survey must be included in the Construction Noise and Vibration Management Sub-plan.
Noise Assessments	
E67	All noise and vibration assessment, management and mitigation required by this approval must consider the cumulative noise impacts of approved CSSI and SSI projects. This includes using ambient and background levels which do not include other WestConnex M4 East and New M5 (SSI 6307 and SSI 6788) projects. This condition applies to all works and operation.
Works Hours	
E68	Works must be undertaken during the following hours: (a) 7:00 am to 6:00 pm Mondays to Fridays, inclusive; (b) 8:00 am to 1:00 pm Saturdays; and (c) at no time on Sundays or public holidays.
E69	Notwithstanding Condition E68 , works may be undertaken between 1:00 pm to 6:00 pm on Saturday.
E70	Notwithstanding Conditions E68 and E69 the following works are permitted to be undertaken 24 hours a day, seven days a week: (a) tunnelling activities excluding cut and cover tunnelling; (b) haulage of spoil and delivery of material; (c) works within an acoustic shed; and (d) tunnel fit out works. Other surface works associated with tunnelling must only be undertaken in accordance with the requirements of Condition E73 .
Variation to Work Hours	
E73	Notwithstanding Conditions E68 to E72 works may be undertaken outside the hours specified under those conditions in the following circumstances: (a) for the delivery of materials required by the NSW Police Force or other authority for safety reasons; or (b) where it is required in an emergency to avoid injury or the loss of life, to avoid damage or loss of property or to prevent environmental harm; or (c) where different construction hours are permitted or required under an EPL in force in respect of the CSSI; or (d) works approved under an Out-of-Hours Work Protocol for works not subject to an EPL as required by Condition E77; or (e) construction that causes $L_{Aeq(15\ minute)}$ noise levels: (i) no more than 5 dB(A) above the rating background level at any residence in accordance with the Interim Construction Noise Guideline (DECC, 2009), and (ii) no more than the 'Noise affected' noise management levels specified in Table 3 of the Interim Construction Noise Guideline (DECC, 2009) at other sensitive land uses, and

Table 3.1 Conditions of Approval for construction noise and vibration

Condition	Key requirement
	<p>(iii) continuous or impulsive vibration values, measured at the most affected residence are no more than the maximum values for human exposure to vibration, specified in Table 2.2 of Assessing Vibration: a technical guideline (DEC, 2006), and</p> <p>(iv) intermittent vibration values measured at the most affected residence are no more than the maximum values for human exposure to vibration, specified in Table 2.4 of Assessing Vibration: a technical guideline (DEC, 2006).</p>
Construction Noise and Vibration – General	
E79	<p>Construction Noise and Vibration Impact Statements must be prepared for construction ancillary facility(s) before any works that result in noise and vibration impacts commence, and include specific mitigation measures identified through consultation with affected sensitive receivers. The Statements must supplement the Construction Noise and Vibration Management Sub-plan or Site Establishment Management Plan(s) and are to be implemented for the duration of the works. The Construction Noise and Vibration Impact Statement for the White Bay Civil Site (C11) must be prepared in consultation with the Port Authority of NSW and NSW Heritage Council.</p>
E80	<p>Noise generating works in the vicinity of potentially-affected community, religious, educational institutions and noise and vibration-sensitive businesses and critical working areas (such as theatres, laboratories and operating theatres) resulting in noise levels above the NMLs must not be timetabled within sensitive periods, unless other reasonable arrangements with the affected institutions are made at no cost to the affected institution.</p>
E81	<p>Mitigation measures must be implemented with the aim of achieving the following construction noise management levels and vibration criteria:</p> <p>(a) construction ‘Noise affected’ noise management levels established using the <i>Interim Construction Noise Guideline</i> (DECC, 2009);</p> <p>(b) vibration criteria established using the <i>Assessing vibration: a technical guideline</i> (DEC, 2006) (for human exposure);</p> <p>(c) Australian Standard AS 2187.2 - 2006 “<i>Explosives - Storage and Use - Use of Explosives</i>”;</p> <p>(d) BS 7385 Part 2-1993 “<i>Evaluation and measurement for vibration in buildings Part 2</i>” as they are “applicable to Australian conditions”; and</p> <p>(e) the vibration limits set out in the <i>German Standard DIN 4150-3: Structural Vibration- effects of vibration on structures</i> (for structural damage).</p> <p>Any works identified as exceeding the noise management levels and/or vibration criteria must be managed in accordance with the Construction Noise and Vibration Management Sub-plan.</p> <p><i>Note: The Interim Construction Noise Guideline identifies ‘particularly annoying’ activities that require the addition of 5 dB(A) to the predicted level before comparing to the construction Noise Management Level.</i></p>
Construction Noise Mitigation – Acoustic Sheds	
E86	<p>All acoustic sheds must be erected as soon as site establishment works at the facilities are completed and before undertaking any works which are required to be conducted within the sheds.</p>

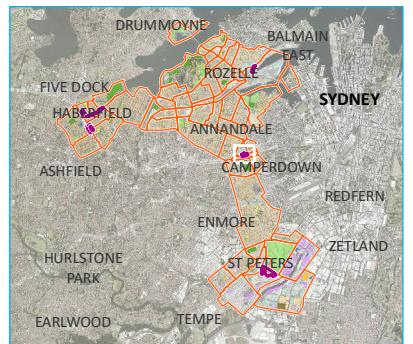

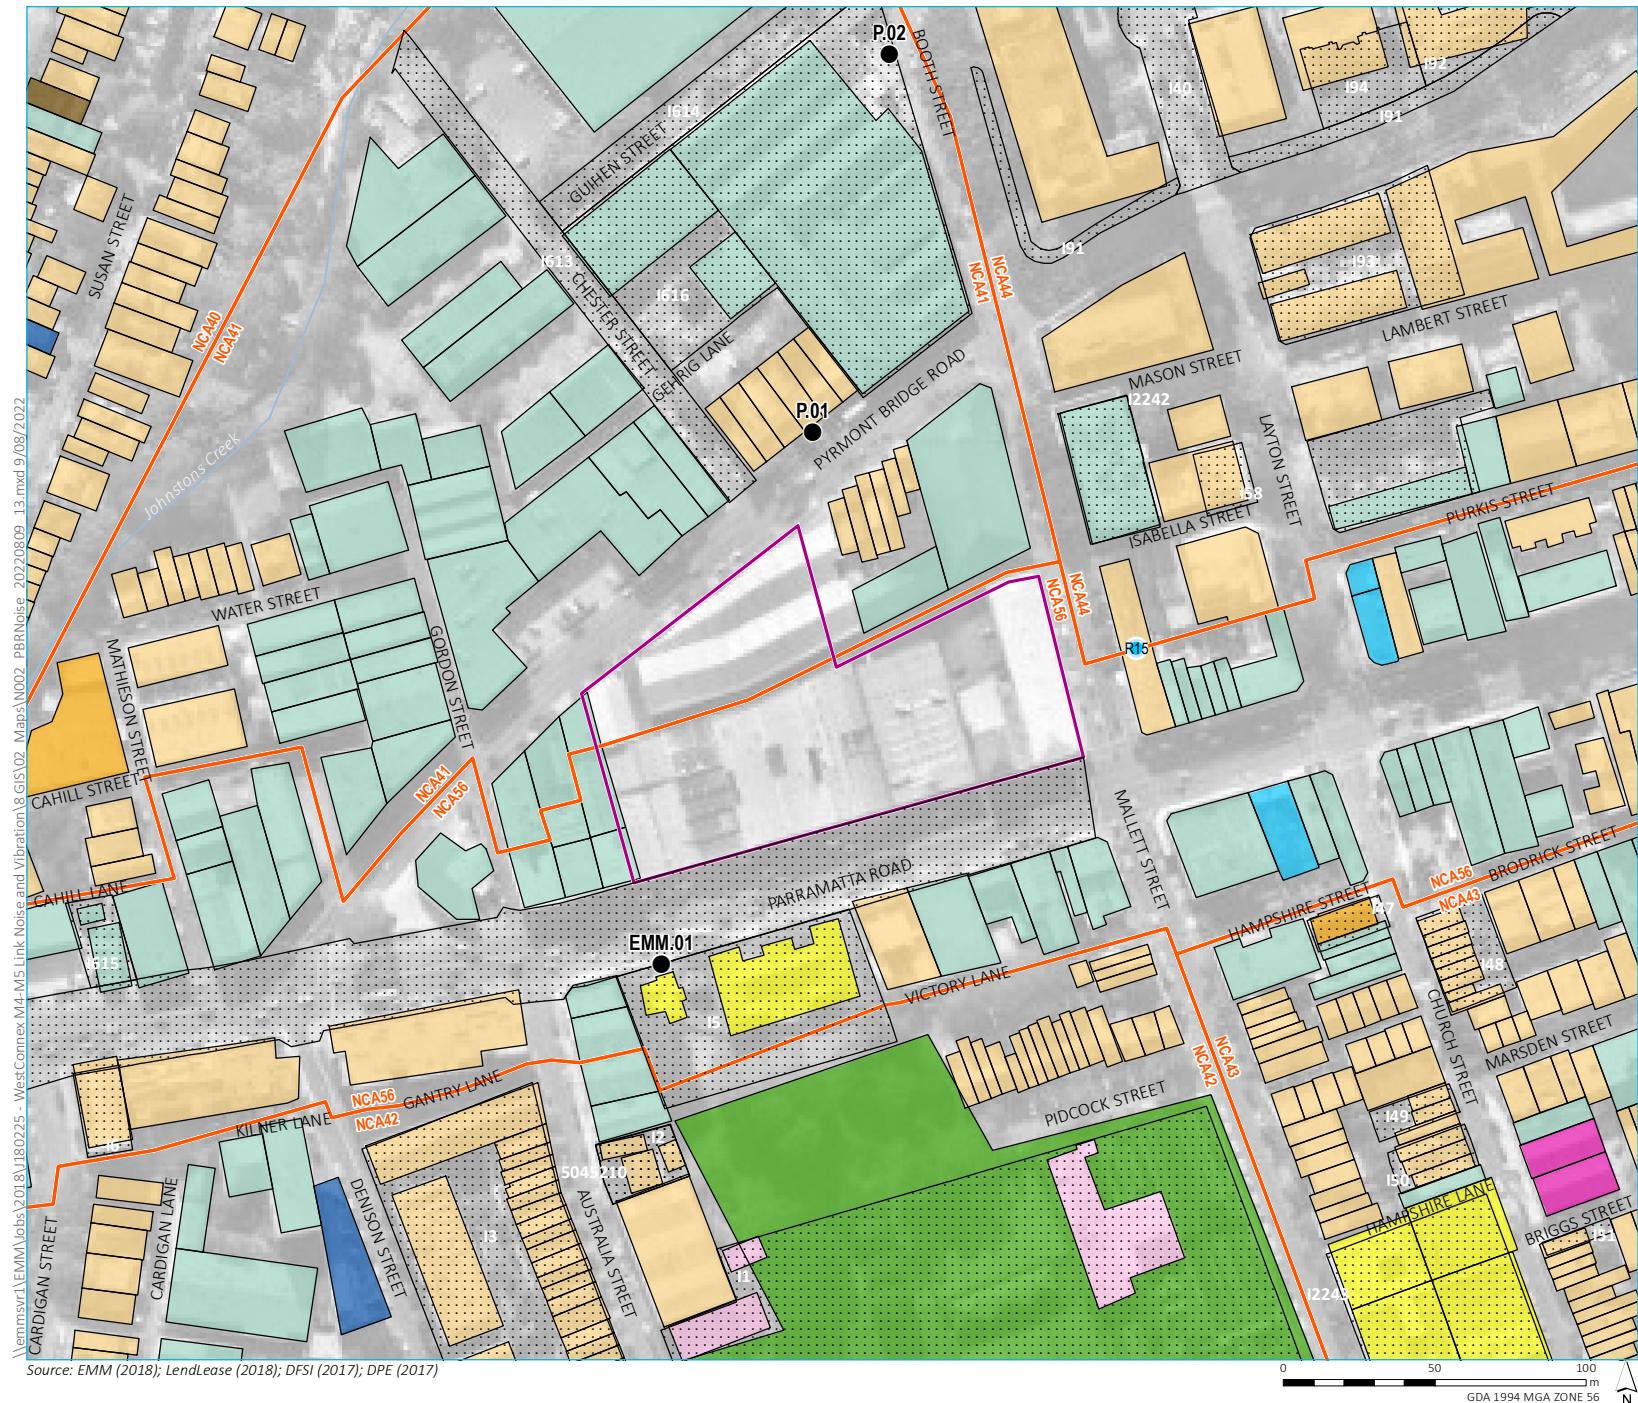

4 Existing environment

4.1 Noise and vibration sensitive receivers

A detailed land use survey has been undertaken to address E66 of the CoA. The outcomes of the land use survey have been incorporated into this CNVIS. A visual representation of the survey is provided in the NVMP. For the purpose of this assessment, receivers potentially sensitive to noise have been categorised as:

- residential dwellings;
- commercial, retail and industrial properties; and
- other, including:
 - education institutions;
 - childcare centres;
 - medical (hospital wards or other uses including medical centres);
 - places of worship;
 - outdoor open areas (passive and active recreation);
 - aged care;
 - hotel;
 - theatre/auditorium;
 - public building; and
 - recording studio.

The sensitive receivers in proximity to the Site is shown in Figure 4.1. Heritage items of importance where vibration emission needs to be considered are also shown.

KEY

WestConnex M4-M5 Link Tunnels
Construction noise and vibration impact statement – Demobilisation

Figure 4.1

4.2 Noise catchment areas

The study area has been divided into Noise Catchment Areas (NCAs). NCAs group individual sensitive receivers by common traits such as existing noise environment and location in relation to the works.

The noise catchment areas of relevance to this CNVIS are shown in Figure 4.1 and described in Table 4.1.

Table 4.1 Noise catchment areas

NCA	Description
NCA41	North of Parramatta Road between Booth Street/Mallett Street and Johnstons Creek. Land use comprises of a mix of residential and commercial receivers and a place of worship
NCA42	South of Parramatta Road between Mallett Street and Salisbury Road. Land use comprises of a mix of residential and commercial receivers, special use facilities and active and passive recreation areas
NCA43	South of Parramatta Road, east of Mallett Street. Land use comprises of a mix of residential and commercial receivers and special use facilities
NCA44	North of Parramatta Road, east of Booth Street. Land use comprises of a mix of residential and commercial receivers.
NCA56 ¹	Representative of receivers adjacent to Parramatta Road.

Source: M4-M5 Link EIS

4.3 Background noise levels

This CNVIS has adopted background noise monitoring levels obtained as part of the EIS which are presented in Table 4.2 for each relevant NCA. Representative monitoring locations are shown in Figure 4.1.

The majority of the NCAs surrounding the project are influenced by road traffic noise levels from major roads. In accordance with prescribed methods in the NSW Industrial Noise Policy (Section 3.3) and the NSW Road Noise Policy (Section 2.5.5), the background noise logging data for the Project was reviewed in greater detail to identify potential shoulder periods. Shoulder periods are defined as periods between the standard INP day, evening and night periods where there may be a steady rise or fall in background noise levels and therefore a justification to define an RBL specific to that time period.

It is proposed to adopt shoulder period Noise Management Levels (NMLs) during 5am to 7am (morning shoulder) and 10pm to midnight (evening shoulder) in order to manage noise according to the noise characteristics of the catchments.

It is noted that the Interim Construction Noise Guideline (ICNG) relies on methodologies contained within the NSW Industrial Noise Policy for the establishment of RBLs. Hence, this approach is deemed consistent with the guidance provided by the ICNG.

Table 4.2 Rating background levels

Rep monitoring location	Rating background level (RBL), $L_{A90(15\text{min})}$				
	Morning shoulder (5am to 7am) ³	Day	Evening	Evening shoulder (10pm to 12am) ⁴	Night
P.01 ²	46	51	49	45	41
P.02 ²	49	53	46	48	46
EMM.01	56	59	59	55	51

Notes:

1. ICNG defines daytime period as 7:00am to 6:00pm Monday to Saturday, 8:00am to 6:00 pm Sunday; Evening as 6:00pm to 10:00pm; Night as 10:00pm to 7:00am Monday to Saturday, 10:00pm to 8:00am Sunday.
2. Taken from New M5 EIS.
3. There is a steady rise in background noise levels between 5am and 7am. Hence a shoulder period has been applied in accordance with the INP by taking the mid-point of day and night RBLs.
4. There is a steady fall in background noise levels between 10pm and 12am. Hence a shoulder period has been applied in accordance with the INP by taking the mid-point of evening and night RBLs.

5 Construction noise criteria

5.1 Interim Construction Noise Guideline

The ICNG provides guidelines for the assessment and management of noise from construction works.

Table 5.1 is an extract from the ICNG and provides construction NMLs for residential receivers for both recommended standard construction hours and outside of these periods.

It is noted that the CoA allows extended standard hours of construction during 1pm to 6pm on Saturdays which deviates slightly from ICNG recommended standard hours.

Table 5.1 ICNG residential noise management levels

Time of day	Management level $L_{Aeq,15\text{ minute}}$	How to apply
Recommended standard hours: Monday to Friday 7:00 am to 6:00 pm Saturday 8:00 am to 6:00 pm ² No work on Sundays or public holidays	Noise affected RBL + 10 dB	<p>The noise affected level represents the point above which there may be some community reaction to noise.</p> <ul style="list-style-type: none">Where the predicted or measured $L_{Aeq,15\text{ minute}}$ is greater than the noise affected level, the proponent should apply all feasible and reasonable work practices to meet the noise affected level.The proponent should also inform all potentially impacted residents of the nature of works to be carried out, the expected noise levels and duration, as well as contact details.
	Highly noise affected 75 dB	<p>The highly noise affected level represents the point above which there may be strong community reaction to noise.</p> <ul style="list-style-type: none">Where noise is above this level, the relevant authority (consent, determining or regulatory) may require respite periods by restricting the hours that the very noisy activities can occur, taking into account:times identified by the community when they are less sensitive to noise (such as before and after school for works near schools, or mid-morning or mid-afternoon for works near residences; andif the community is prepared to accept a longer period of construction in exchange for restrictions on construction times.
Outside recommended standard hours	Noise affected RBL + 5 dB	<ul style="list-style-type: none">A strong justification would typically be required for works outside the recommended standard hours.The proponent should apply all feasible and reasonable work practices to meet the noise affected level.Where all feasible and reasonable practices have been applied and noise is more than 5 dB(A) above the noise affected level, the proponent should negotiate with the community.

Notes:

- Noise levels apply at the property boundary that is most exposed to construction noise, and at a height of 1.5 m above ground level. If the property boundary is more than 30 m from the residence, the location for measuring or predicting noise levels is at the most noise-affected point within 30 m of the residence. Noise levels may be higher at upper floors of the noise affected residence.
- ICNG defines the standard construction period as Saturday 8:00am to 1:00pm, however the CoA defines it as 8:00am to 6:00pm.

Table 5.2 summarises noise management levels for non-residential land uses as defined in the ICNG.

Table 5.2 ICNG noise management levels at other land uses

Land use	Management level, $L_{Aeq,15\text{ min}}$
Industrial premises	External noise level 75 dB (when in use)
Offices, retail outlets	External noise level 70 dB (when in use)
Classrooms at schools and other educational institutions	Internal noise level 45 dB (when in use)
Hospital wards and operating theatres	Internal noise level 45 dB (when in use)
Places of worship	Internal noise level 45 dB (when in use)
Active recreation areas	External noise level 65 dB (when in use)
Passive recreation areas	External noise level 60 dB (when in use)

Source: ICNG (DECC, 2009).

The ICNG provides further guidance for construction noise levels at commercial and industrial premises as follows:

Due to the broad range of sensitivities that commercial or industrial land can have to noise from construction, the process of defining management levels is separated into three categories. The external noise levels should be assessed at the most-affected occupied point of the premises:

- industrial premises: external $L_{Aeq(15\text{ min})}$ 75 dB(A)
- offices, retail outlets: external $L_{Aeq(15\text{ min})}$ 70 dB(A)
- other businesses that may be very sensitive to noise, where the noise level is project specific as discussed below.

Examples of other noise-sensitive businesses are theatres and child care centres. The proponent should undertake a special investigation to determine suitable noise levels on a project-by-project basis; the recommended ‘maximum’ internal noise levels in AS 2107 Acoustics – Recommended design sound levels and reverberation times for building interiors may assist in determining relevant noise levels (Standards Australia 2000).

The proponent should assess construction noise levels for the project, and consult with occupants of commercial and industrial premises prior to lodging an application where required.

During construction, the proponent should regularly update the occupants of the commercial and industrial premises regarding noise levels and hours of work.

5.2 Sleep disturbance at residents

The Site will not operate during the night-time period (10pm to 7am). Therefore, the assessment of potential sleep disturbance at residences is not required in accordance with the INP application notes.

5.3 Project specific NMLs – residential

The ICNG provides guidelines for the assessment and management of noise from construction works.

In accordance with the ICNG and based on the RBLs presented in Table 4.2, Table 5.3 presents the project specific construction noise affected NMLs applicable to residential premises during the proposed work hours. The highly noise affected NML also applies to all residential receivers during standard hours.

Table 5.3 Project specific NMLs at residential locations

NCA	Rep monitoring location	Standard construction NMLs (RBL + 10dB) Day ¹	Out of hours NMLs (RBL + 5dB) ¹					
			Morning shoulder (5am to 7am)	Day	Evening	Evening shoulder (10m to 12am)	Night	Sleep disturbance screening criteria (RBL + 15dB)
NCA40	P.01	61	51	56	54	50	46	56
NCA41	P.01	61	51	56	54	50	46	56
NCA42	P.01	61	51	56	54	50	46	56
NCA43	P.01	61	51	56	54	50	46	56
NCA44	P.01	61	51	56	54	50	46	56
R15 (Receiver ID 30256)	P.02 ²	63	54	58	55	53	51	61
NCA56	EMM.01	72	61	67	64	60	56	66

Notes:

- Noise levels apply at the property boundary that is most exposed to construction noise, and at a height of 1.5 m above ground level. If the property boundary is more than 30 m from the residence, the location for measuring or predicting noise levels is at the most noise-affected point within 30 m of the residence. Noise levels may be higher at upper floors of the noise affected residence.
- NMLs have been applied to R15. This receiver is located between Pyrmont Bridge Road and Parramatta Road. It is therefore considered more appropriate to assign NMLs based on the RBLs recorded at P.02.

5.4 Project specific NMLs – non-residential

Table 5.4 presents the project specific construction NMLs applicable to non-residential land uses as defined in the NSW ICNG and AS2107.

Table 5.4 Project specific NMLs at non-residential land uses

Land use	Noise management level (when in use), L _{Aeq,15 minute}
Industrial premises	External noise level 75 dB
Offices, retail outlets	External noise level 70 dB
Classrooms at schools and other educational institutions	Internal noise level 45 dB
Hospital wards and operating theatres	Internal noise level 45 dB
Places of worship	Internal noise level 45 dB
Active recreation areas	External noise level 65 dB
Passive recreation areas	External noise level 60 dB
Child care centres ¹	External noise level 65 dB
Aged care ¹	External noise level 65 dB (7am to 10pm) 60 dB (10pm to 7am)
Hotels ¹	External noise level 65 dB (7am to 10pm) 60 dB (10pm to 7am)
Theatre/auditorium ¹	External noise level 45 dB
Recording studio ¹	External noise level 45 dB
Public building ¹	Determined on site specific basis

Notes:

1. NML based on AS2017 recommend maximum internal noise level and the premise that windows and doors for such development would typically remain closed, providing 20 dB of outdoor to indoor construction noise level reduction.
2. Notwithstanding NMLs in this table, Condition E80 states “Noise generating works in the vicinity of potentially-affected community, religious, educational institutions and noise and vibration-sensitive businesses and critical working areas (such as theatres, laboratories and operating theatres) resulting in noise levels above the NMLs must not be timetabled within sensitive periods, unless other reasonable arrangements with the affected institutions are made at no cost to the affected institution.”

6 Construction vibration criteria

6.1 Overview

Vibration criteria adopted for the works are consistent with those established in the EIS and in accordance with the Instrument of Approval (SSI 7485). Condition E81 of SSI 7485 states that mitigation measures must be implemented with the aim of achieving the following vibration criteria:

- vibration criteria established using the Assessing vibration: a technical guideline (DEC 2006) (for human exposure);
- Australian Standard AS 2187.2 - 2006 "Explosives - Storage and Use - Use of Explosives";
- BS 7385 Part 2-1993 "Evaluation and measurement for vibration in buildings Part 2" as they are "applicable to Australian conditions"; and
- the vibration limits set out in the German Standard DIN 4150-3: Structural Vibration- effects of vibration on structures (for structural damage).

It is noted that blasting is not part of the scope for works relevant to this CNVIS.

6.2 Human comfort – Assessing vibration: a technical guideline (DEC)

Environmental Noise Management – Assessing Vibration: a technical guideline (DEC, 2006) is based on guidelines contained in BS 6472 – 2008, Evaluation of human exposure to vibration in buildings (1-80Hz).

The Guideline presents preferred and maximum vibration values for use in assessing human responses to vibration and provides recommendations for measurement and evaluation techniques. At vibration values below the preferred values, there is a low probability of adverse comment or disturbance to building occupants. Where all feasible and reasonable mitigation measures have been applied and vibration values are still beyond the maximum value, it is recommended the operator negotiate directly with the affected community.

The guideline defines three vibration types and provides direction for assessing and evaluating the applicable criteria. Table 2.1 of the Guideline provides examples of the three vibration types and has been reproduced in Table 6.1.

Table 6.1 Examples of types of vibration (from Table 2.1 of the guideline)

Continuous Vibration	Impulsive Vibration	Intermittent Vibration
Machinery, steady road traffic, continuous construction activity (such as tunnel boring machinery).	Infrequent: Activities that create up to 3 distinct vibration events in an assessment period, eg occasional dropping of heavy equipment, occasional loading and unloading. Blasting is assessed using ANZECC (1990).	Trains, intermittent nearby construction activity, passing heavy vehicles, forging machines, impact pile driving, jack hammers. Where the number of vibration events in an assessment period is three or fewer these would be assessed against impulsive vibration criteria.

Intermittent vibration is representative of activities such as impact hammering, vibratory rolling or general excavation work (such as an excavator tracking) and, as such, is most relevant to this assessment.

Intermittent vibration (as defined in Section 2.1 of the Guideline) is assessed using the vibration dose concept which relates to vibration magnitude and exposure time.

Section 2.4 of the Guideline provides acceptable values for intermittent vibration in terms of vibration dose values (VDV) which requires the measurement of the overall weighted RMS (root mean square) acceleration levels over the frequency range 1 Hz to 80 Hz. To calculate VDV the following formula (refer section 2.4.1 of the Guideline) was used:

$$VDV = \left[\int_0^T a^4(t) dt \right]^{0.25}$$

Where VDV is the vibration dose value in $m/s^{1.75}$, $a(t)$ is the frequency-weighted rms of acceleration in m/s^2 and T is the total period of the day (in seconds) during which vibration may occur.

The Acceptable Vibration Dose Values (VDV) for intermittent vibration are reproduced in Table 6.2.

Table 6.2 Acceptable vibration dose values (VDV) for intermittent vibration ($m/s^{1.75}$)

Location	Daytime		Night-time	
	Preferred value, $m/s^{1.75}$	Maximum value, $m/s^{1.75}$	Preferred value, $m/s^{1.75}$	Maximum value, $m/s^{1.75}$
Critical Areas	0.10	0.20	0.10	0.20
Residences	0.20	0.40	0.13	0.26
Offices, schools, educational institutions and places of worship	0.40	0.80	0.40	0.80
Workshops	0.80	1.60	0.80	1.60

Notes:

1. Daytime is 7 am to 10 pm and night-time is 10 pm to 7 am.
2. These criteria are indicative only, and there may be a need to assess intermittent values against continuous or impulsive criteria for critical areas.

There is a low probability of adverse comment or disturbance to building occupants at vibration values below the preferred values. Adverse comment or complaints may be expected if vibration values approach the maximum values. The Guideline states that activities should be designed to meet the preferred values where an area is not already exposed to vibration.

6.3 Structural vibration criteria

Most commonly specified “safe” structural vibration limits are designed to minimise the risk of threshold or cosmetic surface cracks, and are set well below the levels that have potential to cause damage to the main structure.

6.3.1 Australian Standard AS 2187.2 - 2006

In terms of the most recent relevant vibration damage criteria, Australian Standard AS 2187.2 - 2006 “Explosives - Storage and Use - Use of Explosives” recommends the frequency dependent guideline values and assessment methods given in BS 7385 Part 2-1993 “Evaluation and measurement for vibration in buildings Part 2” be used as they are “applicable to Australian conditions”.

The standard sets guide values for building vibration based on the lowest vibration levels above which damage has been credibly demonstrated. These levels are judged to give a minimum risk of vibration induced damage, where minimal risk for a named effect is usually taken as a 95% probability of no effect.

Sources of vibration that are considered in the Standard include demolition, blasting (carried out during mineral extraction or construction excavation), piling, ground treatments (eg compaction), construction equipment, tunnelling, road and rail traffic and industrial machinery.

The recommended limits (guide values) for transient vibration to ensure minimal risk of cosmetic damage to residential and industrial buildings are presented numerically in Table 6.3 and graphically in Figure 6.1.

Table 6.3 Transient vibration guide values - minimal risk of cosmetic damage

Line	Type of Building	Peak Component Particle Velocity in Frequency Range of Predominant Pulse	
		4 Hz to 15 Hz	15 Hz and Above
1	Reinforced or framed structures Industrial and heavy commercial buildings	50 mm/s at 4 Hz and above	
2	Unreinforced or light framed structures Residential or light commercial type buildings	15 mm/s at 4 Hz increasing to 20 mm/s at 15 Hz	20 mm/s at 15 Hz increasing to 50 mm/s at 40 Hz and above

Source: BS 7385 Part 2-1993.

The Standard states that the guide values in Table 6.3 relate predominantly to transient vibration which does not give rise to resonant responses in structures and low-rise buildings.

Where the dynamic loading caused by continuous vibration is such as to give rise to dynamic magnification due to resonance, especially at the lower frequencies where lower guide values apply, then the guide values in Table 6.3 may need to be reduced by up to 50%.

Sheet piling activities (for example) are considered to have the potential to cause dynamic loading in some structures (eg residences) and it may therefore be appropriate to reduce the transient values by 50%.

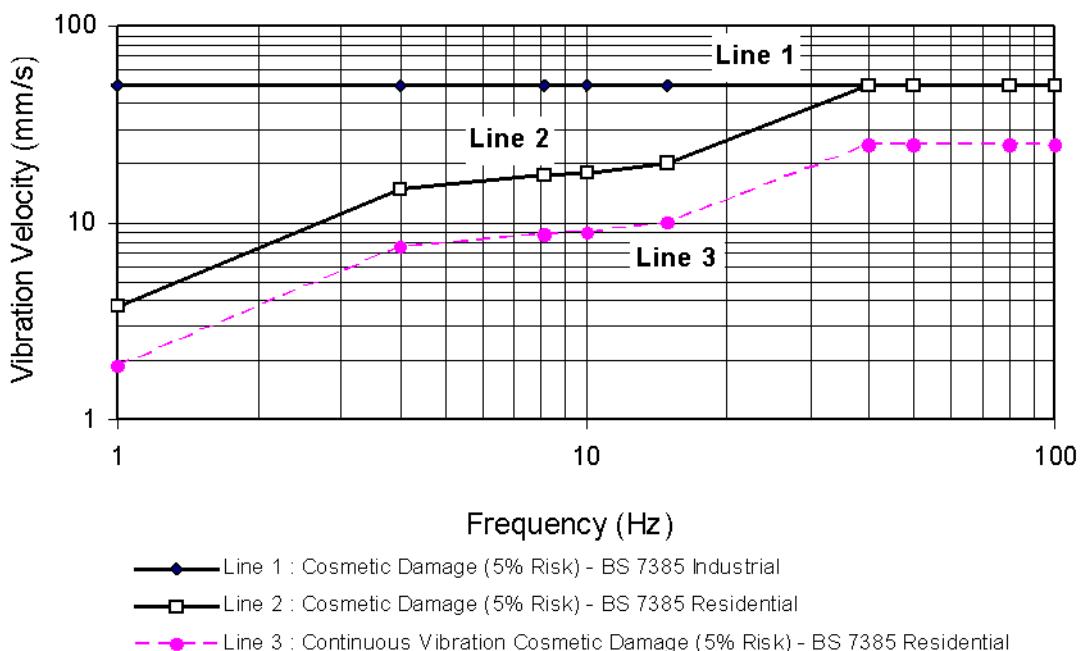

Figure 6.1 Graph of transient vibration guide values for cosmetic damage

In the lower frequency region where strains associated with a given vibration velocity magnitude are higher, the guide values for building types corresponding to Line 2 are reduced. Below a frequency of 4 Hz where a high displacement is associated with the relatively low peak component particle velocity value, a maximum displacement of 0.6 mm (zero to peak) is recommended. This displacement is equivalent to a vibration velocity of 3.7 mm/s at 1 Hz. The standard goes on to state that minor damage is possible at vibration magnitudes which are greater than twice those given in Table 6.3, and major damage to a building structure may occur at values greater than four (4) times the tabulated values.

Fatigue considerations are also addressed in the Standard and it is concluded that unless calculation indicates that the magnitude and number of load reversals is significant (in respect of the fatigue life of building materials) then the guide values in Table 6.3 should not be reduced for fatigue considerations.

In order to assess the likelihood of cosmetic damage due to vibration, AS2187 specifies that vibration measurements should be undertaken at the base of the building and the highest of the orthogonal vibration components (transverse, longitudinal and vertical directions) should be compared with the criteria curves presented in Figure 6.1.

It is noteworthy that extra to the guide values nominated in Table 6.3, the Standard states that:

“Some data suggests that the probability of damage tends towards zero at 12.5 mm/s peak component particle velocity. This is not inconsistent with an extensive review of the case history information available in the UK.”

Also that:

“A building of historical value should not (unless it is structurally unsound) be assumed to be more sensitive.”

A vibration screening criterion of 15 mm/s is recommended for structures surrounding the Site for vibration inducing construction. This should be reduced to 7.5mm/s (by 50%) if the vibration activity is continuous and has the potential to cause resonance effects in surrounding structures (eg sheet piling).

6.3.2 German Standard DIN 4150-3:1999

The German Standard DIN 4150 - Part 3: 1999, provides the strictest guideline levels of vibration velocity for evaluating the effects of vibration in structures. The limits presented in this standard are generally recognised to be conservative.

The DIN 4150 values (maximum levels measured in any direction at the foundation, or maximum levels measured in (x) or (y) horizontal directions, in the plane of the uppermost floor), are summarised in Table 6.4 and shown graphically in Figure 6.2.

For residential and commercial type structures, the Standard recommends safe limits as low as 5mm/s and 20 mm/s respectively. These limits increase with frequency values above 10 Hz. The operational frequency of construction plant typically ranges between 10 Hz to 30 Hz, and hence according to DIN4150, the safe vibration guide limit range for dwellings is 5 to 15 mm/s. For reinforced commercial type buildings, the limit is as low as 20 mm/s, while for heritage or sensitive structures the lower limit is 3 mm/s.

Table 6.4 Structural damage guideline values of vibration velocity – DIN4150

Line ¹	Type of Structure	Vibration Velocity in mm/s			
		At Foundation at a Frequency of		Plane of Floor of Uppermost Storey	
		1 Hz to 10 Hz	10 Hz to 50 Hz	50 Hz to 100 Hz	All Frequencies
1	Buildings used for commercial purposes, industrial buildings and buildings of similar design	20	20 to 40	40 to 50	40
2	Dwellings and buildings of similar design and/or use	5	5 to 15	5 to 20	15
3	Structures that because of their particular sensitivity to vibration do not correspond to those listed in Lines 1 or 2 and have intrinsic value (eg buildings that are under a preservation order)	3	3 to 8	8 to 10	8

Notes:

1. "Line" refers to curves in Figure 1 of DIN4150.

2. For frequencies above 100Hz the higher values in the 50Hz to 100Hz column should be used.

These levels are “safe limits”, for which damage due to vibration effects is unlikely to occur. “Damage” is defined in DIN 4150 to include even minor non-structural effects such as superficial cracking in cement render, the enlargement of cracks already present, and the separation of partitions or intermediate walls from load bearing walls.

Should such damage be observed without vibration levels exceeding the “safe limits” then it is likely to be attributable to other causes. DIN 4150 also states that when vibration levels higher than the “safe limits” are present, it does not necessarily follow that damage will occur.

As indicated by the guide levels from DIN 4150 in Figure 6.2, high frequency vibration has less potential to cause damage than lower frequencies. Furthermore, the “point source” nature of vibration from plant causes the vibratory disturbances to arrive at different parts of nearby large structures in an out-of-phase manner, thereby reducing its potential to excite in-phase motion of the low order modes of vibration in such structures.

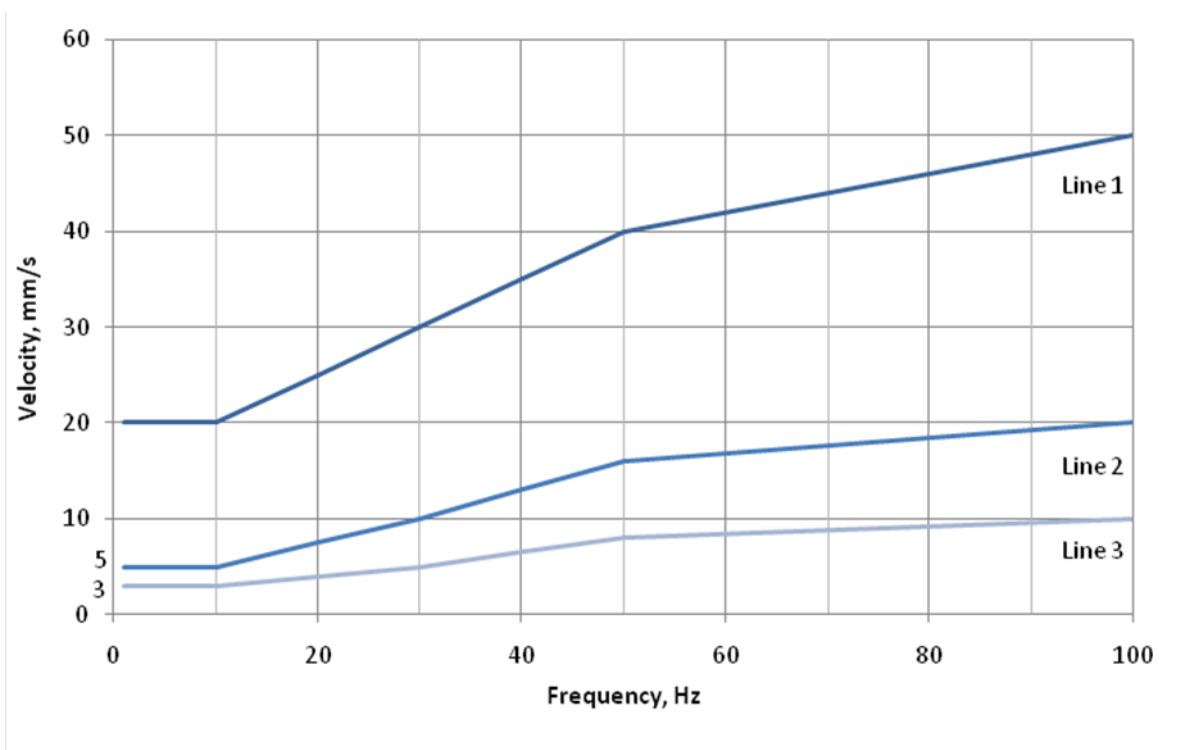

Figure 6.2 DIN4150 structural damage guideline values of vibration velocity

6.3.3 Project specific structural vibration criteria

Condition E81 requires that BS7385-2 and DIN4150-3 are both satisfied. DIN4150-3 is more conservative and provides more information for the assessment of heritage structures. If DIN4150-3 limits are satisfied, the limits in BS7385-2 will also be satisfied.

DIN4150-3 has therefore been adopted as the structural vibration criteria for the project.

7 Construction noise assessment

7.1 Assessment method

The following sections outline the modelling method and key assumptions adopted to assess noise levels from operational scenarios of the Site in accordance with the ICNG (EPA 2009) and CNVG (RMS 2015) requirements.

Noise emissions from the Site were modelled using DGMR Software proprietary modelling software, iNoise, from the same developers of Brüel & Kjaer's Predictor. The model allows prediction under the ISO9613-2 "Acoustics – Attenuation of Sound during Propagation Outdoors – general method" algorithm. This algorithm is accepted by the EPA. Features which affect the predicted noise level that are considered in the noise modelling include:

- equipment sound power levels and locations;
- screening from structures (excluding internal walls);
- receiver locations;
- ground topography;
- noise attenuation due to geometric spreading;
- ground absorption; and
- atmospheric absorption.

The model was populated with 3-D topography of the Site area and surrounding area, extending out to nearest assessment locations and 3-D buildings. Construction plant and equipment representing the range of proposed construction scenarios was placed at locations which would represent typical to worst case noise levels throughout the construction program.

7.2 Scenarios

The following broad work stages have been assessed:

- Stage 1 - Tunnel backfilling inside acoustic shed, ventilation building removal and site office setup outside acoustic shed.
- Stages 2-5 – Site demobilisation (removal of the acoustic shed, removal of site fixtures, and site clearing and concreting).

No out of hours works are proposed for Stages 1 to 5. All modelling scenarios assessed, plant and equipment listed and noise mitigation adopted are summarised in Appendix A. Figures showing the location of equipment and noise mitigation are provided in Appendix B.

For all scenarios, it has been assumed that all plant and equipment is operating simultaneously, unless specific utilisation percentages are stated otherwise. This is considered to be a conservative representation of a typical worst-case scenario.

Table 7.1 provides a summary of the work stages and the noise criteria applicable to them.

Table 7.1 Summary of scenarios and applicable noise criteria

Scenario	Activities included	Applicable noise criteria
Stage 1	Tunnel backfill inside acoustic shed, vent building removal / site office setup outside acoustic shed	Backfilling inside acoustic shed – CoA E70 Other activities – ICNG Noise Management Levels (as per CoA E73)
Stage 2	Shed demolition/office demobilisation	ICNG Noise Management Levels (as per CoA E73)
Stage 3	Demolition of pavement/removal of tanks and services/demolition of deck slab/demolition of retaining walls at decline	ICNG Noise Management Levels (as per CoA E73)
Stage 4	Remove HV/LV switchyard and reinstate Bignell Lane to original route	ICNG Noise Management Levels (as per CoA E73)
Stage 5	Level site and chisel seal (deckslab and switchyard area)	ICNG Noise Management Levels (as per CoA E73)

7.3 Stages 1-5

7.3.1 Results

Predicted noise levels for Stages 1-5 are provided in Appendix C.

The predictions relate to the most affected façade of each assessment location building.

The total number of exceedances predicted at receiver locations are detailed in Table 7.2.

Table 7.2 Predicted number of receivers above NMLs

NML exceedance category	Number of Exceedances Per Stage				
	Stage 1	Stage 2	Stage 3	Stage 4	Stage 5
1-10dB	3	6	54	14	20
11-20dB	0	0	17	0	2
>20dB	0	0	1	0	0
Number of receivers where total predicted noise level is >75dB (Highly noise affected) ¹	0	0	2	0	1

Notes: 1. This count of highly affected receivers is independent of the NML exceedance count above.

All stages of the demobilisation have predicted exceedances of NMLs at multiple receiver locations. Stage 3 predictions indicate the potential for the highest number of locations to exceed NMLs, with 72 predicted exceedances and two receivers that exceed 75 dB. Stage 3 also has one exceedance in the 20 dB and greater category. This is due to the demolition works that will take place in Stage 3 that must happen after the acoustic shed has been removed. All other stages are predicted to have significantly less impact.

i Comparison to EIS

For the demobilisation of site, the EIS assessed a single broad scenario (PYR-13 - site rehabilitation and landscaping). This scenario is not comparable to the demobilisation scenarios assessed within this CNVIS, as the equipment and activities proposed are not proportionate. Given the activities and equipment proposed, EIS scenario “PYR-01 – Demolition of existing buildings” is considered most comparable to the demobilisation works assessed in this CNVIS. The predicted number of receivers above NML for each of these scenarios are provided in Table 7.3.

Table 7.3 EIS predicted number of receivers above NMLs

NML exceedance category	Number of exceedances per stage	
	PYR – 01	Demolition of existing buildings
1-10dB		84
11-20dB		15
>20dB		3
Number of receivers where total predicted noise level is >75dB (Highly noise affected) ¹		6

When comparing the EIS impacts to this CNVIS’s Stage 3, where the pavement, decline retaining walls and deck slab are being removed, it is noted that 30 more receivers were predicted to be impacted in the EIS assessment. Nevertheless, works are proposed to be completed during standard daytime hours only and will be for a limited period of time.

ii Sleep disturbance

The Site will not operate during the night-time period (10pm to 7am). Therefore, the assessment of potential sleep disturbance at residences is not required in accordance with the INP application notes.

7.4 Road traffic noise

Road traffic noise impacts due to increased truck movements on public roads generated by 24/7 tunnelling activities was assessed in M4-M5 Link Mainline Tunnels Noise and Vibration Assessment - Proposed heavy vehicle changes – PBR

8 Construction vibration

8.1 Safe working distances and assessment methodology

Table 8.1 provides an indication of potential offset distances required from sensitive receivers in order to comply with DIN4150-3 vibration criteria. This information should be used by relevant personnel when planning their work to identify when other forms of construction methodology or vibration mitigation and/or management measures may need to be investigated or implemented. This data is based on information provided in the noise and vibration assessment prepared for the EIS as well as publicly available data for other large infrastructure projects in Sydney.

The safe working distances provided are indicative and will vary depending on the particular item of plant and local geotechnical conditions. They apply to cosmetic damage of typical buildings under typical geotechnical conditions.

Table 8.1 Vibration levels and safe working distance guidance – transient vibration

Source	Estimated safe working distance			
	Human comfort	Commercial, Industrial or similar structures	Dwellings and similar structures	Heritage and other sensitive structures
Large Vibratory Roller (20t)	100m	5m	33m	50m
Medium Vibratory Roller (10t)	100m	5m	20m	31m
Compactor (7t)	50m	5m	20m	20m
Hand operated wacka packer on backfill	10m	5m	5m	5m
Hand operated wacka packer on asphalt	10m	5m	5m	5m
Heavy Hydraulic Hammer (1500kg hammer on 30t excavator)	73m	5m	22m	44m
Medium Hydraulic Hammer (900kg hammer on 18t excavator)	23m	5m	10m	15m
Light Hydraulic Hammer (300kg on 5t excavator)	10m	5m	5m	5m
Jack Hammer	Avoid contact with structure	5m	5m	5m
Air Track Drill	20m	5m	5m	10m
Small rock drill (estimate)	10m	5m	5m	5m
Down the Hole Hammer	10m	5m	5m	5m
Ripping (measured in Sydney sandstone)	10m	5m	5m	5m
Impact Piling	30m	5m	10m	20m
Vibratory Piling	30m	5m	26m	100m
Rock Sawing	10m	5m	5m	5m
Bored Piling	N/A	5m	10m	10m

Notes: 1. Based on information provided in the NorthConnex Construction Noise and Vibration Management Sub Plan prepared by Lend Lease Bouygues Joint Venture dated 1 May 2017.

Proposed site demobilisation construction plant and equipment has been utilised to determine where, if at all, the safe working distances are likely to be encroached and, if so, likely areas of impact.

Construction scenarios considered are consistent with those presented for the construction noise assessment. Proposed works with the potential to cause vibration impact at nearby vibration-sensitive receptors include the use of vibratory rollers or excavations including the use of a rock hammer for the shed.

The number of receptors with potential to exceed relevant vibration criteria at each site is summarised in Table 8.2. Vibration contour plots are provided in the NVMP.

Table 8.2 Potential vibration impacts

Equipment item	Construction stage	Number of receptors with potential to exceed vibration criteria ¹			
		Human comfort (residences)	Cosmetic damage		
			Dwellings, garages	Commercial, industrial or similar	Heritage and other sensitive structures
Heavy hydraulic hammer ²	3	21	2	3	2
Large vibratory roller (20t)	1,4 and 5	49	8	3	2

Notes:

- 1.The number of potentially affected receptors has been calculated based on the most conservative safe distances provided in Table 8.1 for the relevant task.
2. 1500kg hammer on 30t excavator.
3. Based on the air track drill in Table 8.1.

9 Noise mitigation and management

9.1 General

The EPA's NSW ICNG requires that construction noise levels are assessed against NMLs.

With the exception of tunnelling related activities within the acoustic shed, spoil haulage and deliveries which are permitted under CoA 70, it is noted that all tunnel support activities which are proposed in this assessment are not strictly permissible during out of hour periods, unless NMLs are satisfied (refer CoA E73). To that end, all such works are proposed to occur during standard daytime construction hours only.

Noise mitigation and management that have been adopted to satisfy these requirements are described in this section.

Works have been staged to leave the acoustic shed in position for as long as possible, however, program is constrained by the office demobilisation. This allows access to precast concrete sections and the decline retaining wall whilst the decision to leave the section of retaining wall in place within the shed has been made for safety reasons with adjacent heavy vehicle haul roads. Hammering will therefore occur after shed demolition and this work will be monitored as per Section 9.3.

9.2 Site specific mitigation and management

This CNVIS assumes the following mitigation shall be implemented on site:

- Acoustic shed over the tunnel shaft and spoil handling sites will remain for Stage 1 of the demobilisation.
- Hoarding around the site will remain in place throughout demobilisation.
- Where temporary fencing is required on the property boundary, noise blankets will be considered as a standard mitigation measure.

9.3 Compliance noise monitoring

Monitoring will be conducted in accordance with the CEMP to target noisiest work when commencing or in response to complaints. Currently no out-of-hours works (OOHW) are proposed, however, should they be needed, they will be assessed under the existing OOHW Protocol.

9.4 General mitigation and management

9.4.1 Work practices

Work practice methods include:

- regular reinforcement (such as at toolbox talks) of the need to minimise noise and vibration;
- regular identification of noisy activities and adoption of improvement techniques;
- avoiding the use of portable radios, public address systems or other methods of site communication that may unnecessarily impact upon nearby residents;
- develop routes for the delivery of materials and parking of vehicles to minimise noise;
- where possible, avoid the use of equipment that generates impulsive noise;

- minimise the movement of materials and plant and unnecessary metal-on-metal contact;
- minimise truck movements; and
- schedule respite periods for intensive works as determined through consultation with potentially affected neighbours (eg a daily respite period for a minimum of one hour at midday).

9.4.2 Plant and equipment

Additional measures for plant and equipment include:

- where possible, choose quieter plant and equipment based on the optimal power and size to most efficiently perform the required tasks;
- movement alarms and beepers to be replaced with non-tonal level varying quackers or equivalent;
- operate plant and equipment in the quietest and most efficient manner; and
- regularly inspect and maintain plant and equipment to minimise noise and vibration level increases, to ensure that all noise and vibration reduction devices are operating effectively.

9.4.3 Quantifying noise reductions

Approximate noise reductions provided by some of these measures are provided in Table 9.1.

Table 9.1 Relative effectiveness of various forms of noise control

Noise control	Nominal noise reduction possible, in total A-weighted sound pressure level, dB
Increase source to receiver distance ¹	approximately 6 dB for each doubling of distance
Reduce equipment operating times or turn off idling machinery ²	approximately 3 dB per halving of operating time
Operating training on quiet operation ²	up to 3 to 5 dB
Screening (eg noise barrier) ¹	normally 5dB to 10 dB, maximum 15 dB
Enclosure (eg shed/building) ¹	normally 15 dB to 25 dB, maximum 50 dB
Silencing (eg exhaust mufflers) ¹	normally 5 dB to 10 dB, maximum 20 dB

Notes:

1. Sourced from AS2436-2010.

2. Based on EMM's measurement experience at construction and mining sites

9.5 Additional noise mitigation measures – Construction Noise and Vibration Guideline

In many instances, impacts from construction noise and vibration are unavoidable where works are undertaken in relatively close proximity to surrounding receivers. The CNVG includes a list of additional mitigation measures which aim to manage the potential noise impacts. Additional mitigation measures from the CNVG that have been adopted for the project are summarised in Table 9.2.

Table 9.2 CNVG additional noise mitigation measures

ID	Name	Description
N	Notification (letterbox drop or equivalent)	Advanced warning of works and potential disruptions can assist in reducing the impact to the community. The notification may consist of a letterbox drop (or equivalent) detailing work activities, time periods over which these will occur, impacts and mitigation measures. Notification should be a minimum of seven calendar days prior to the start of works. The approval conditions for projects may also specify requirements for notification to the community about works that may impact on them.
SN	Specific notifications	Specific notifications are letterbox drops (or equivalent) to identified stakeholders no later than seven calendar days ahead of construction activities that are likely to exceed the noise objectives. The specific notification should provide additional information to that covered in the general notifications and be targeted at highly affected receivers.
RO	Respite offers	Respite Offers should be considered and adopted where there are high noise and vibration generating activities near receivers. As a guide work should be carried out in continuous blocks that do not exceed three hours each, with a minimum respite period of one hour between each block. The actual duration of each block of work and respite should be flexible to accommodate the usage of and amenity at nearby receivers. The purpose of such an offer is to provide residents with respite from an ongoing impact. This measure is evaluated on a project-by-project basis, and may not be applicable to all projects.
R1	Respite period 1	Out of hours construction conducted during the OOHW period 1 (Monday to Friday 6:00 pm to 10:00 pm, Saturday 7:00 am to 8:00 am and 1:00 pm – 10:00 pm, Sunday/Public Holiday 8:00 am to 6:00 pm) shall be limited to no more than three consecutive evenings per week except where there is a duration respite. For night work these periods of work should be separated by not less than one week and no more than six evenings per month.
R2	Respite period 2	Night time construction in OOHW period 2 (Monday to Friday 10:00 pm to 7:00 am, Saturday 10:00 pm to 8:00 am, Sunday/Public Holiday 6:00 pm to 7:00 am) shall be limited to two consecutive nights except for where there is a Duration Respite. For night work these periods of work should be separated by not less than one week and six nights per month. Where possible, high noise generating works shall be completed before 11 pm.
AA	Alternative accommodation	Alternative accommodation options may be offered to residents living in close proximity to construction works that are likely to experience highly intrusive noise levels (refer to Tables C1-C3 of the CNVG). The specifics of the offer will be identified on a project-by-project basis. Additional aspects for consideration shall include whether the highly intrusive activities occur throughout the night or before midnight.
DR	Duration respite	Respite offers and respite periods 1 and 2 may be counterproductive in reducing the impact on the community for longer duration projects. In this instance and where it can be strongly justified that it may be beneficial to increase the work duration, number of evenings or nights worked through Duration Respite so that the project can be completed more quickly. The project team should engage with the community where noise levels are expected to exceed the NML to demonstrate support for Duration Respite. Where there are few receivers above the NML each of these receivers should be visited to discuss the project to gain support for Duration Respite.
V	Verification	Refer to Appendix F of the CNVG for more details about verification of noise and vibration levels as part of routine checks of noise levels or following reasonable complaints. This verification should include measurement of the background noise level and construction noise. Note this is not required for projects less than three weeks unless to assist in managing complaints.

The level of additional mitigation is then assigned based on the impact classification (ie predicted noise level above NML) and the list of measures in Table 9.3.

Table 9.3 Additional mitigation measures matrix – airborne construction noise

Predicted airborne L _{Aeq(15min)} noise level at receiver				Additional mitigation measures
Perception	dBA above RBL	dBA above NML	Type	Mitigation levels
All hours				
75 dBA or greater			N, V, RO	HA
Standard hours: Mon - Fri (7am – 6pm), Sat (8am – 1pm), Sun/Pub Hol (Nil)				
Noticeable	5 to 10	0	-	NML
Clearly audible	10 to 20	<10	-	NML
Moderately intrusive	20 to 30	10 to 20	N, V	NML + 10
Highly intrusive	>30	>20	N, V	NML + 20
OOHW Period 1: Mon – Fri (6pm – 10pm), Sat (7am – 8am & 1pm – 10pm), Sun/Pub Hol (8am – 6pm)				
Noticeable	5 to 10	<5	-	NML
Clearly audible	10 to 20	5 to 15	N, R1, DR	NML + 5
Moderately intrusive	20 to 30	15 to 25	V, N, R1, DR	NML + 15
Highly intrusive	>30	>25	V, N, SN, R2, DR	NML + 25
OOHW period 2: Mon - Fri (10pm – 7am), Sat (10pm – 8am), Sun/Pub Hol (6pm – 7am)				
Noticeable	5 to 10	<5	N	NML
Clearly audible	10 to 20	5 to 15	V, N, R2, DR	NML + 5
Moderately intrusive	20 to 30	15 to 25	V, N, SN, R2, DR	NML + 15
Highly intrusive	>30	>25	AA, V, N, SN, R2, DR	NML + 25

Note: 1. The following abbreviations are used: Alternative Accommodation (AA), Respite Period 1 (R1), Verification (V), Specific Notifications (SN), Notification drops (N), Respite Period 2 (R2), Negotiated Respite (NR), Highly Affected (HA), Respite Offer (RO), Duration Respite (DR).

Additional noise mitigation measures for the Site are recommended accordance with the CNVG, as not all proposed activities in Stages 1-5 are predicted to be NML compliant.

9.5.1 Additional mitigation outcomes for the project

Based on the noise level predictions in Appendix C, several residences will require additional mitigation measures during standard daytime hours, according to the CNVG. Table 9.4 indicates the number of receivers requiring these additional measures for each operational stage described in Section 7.2.

Table 9.4 Receivers requiring additional mitigation

CNVG Perception Category	Stage 1	Stage 2	Stage 3	Stage 4	Stage 5	CNVG Additional Mitigation Measures	CNVG Additional Mitigation Levels
Moderately Intrusive	0	0	17	0	2	N, V	NML + 10
Highly intrusive	0	0	1	0	0	N, V	NML + 20
75 dBA or greater ¹	0	0	2	0	1	N, V, RO	HA

1. The following abbreviations are used: Verification (V), Notification drops (N), Highly Affected (HA), Respite Offer (RO).

2. This count of highly affected residences is independent of the highly and moderately intrusive counts. Ie the highly affected residences are also captured in the moderately and highly intrusive counts.

ASBJV will implement the additional mitigation and management measures in accordance with Table 9.4. Further, ASBJV will actively consult with the residents at upper floors of neighbouring properties to confirm the level of impact is acceptable and where appropriate apply additional reasonable and feasible mitigation.

9.6 Vibration mitigation measures

The primary form of mitigation of vibration would be ensuring vibration intensive works do not occur within the safe working distances. Further mitigation of vibration would not be required where the safe working distances are adhered to.

If vibration intensive works are planned within the safe working distances identified, monitoring will be adopted to verify actual vibration levels generated and compared against the DIN-4150 criteria. Where compliance with the DIN-4150 criteria is confirmed, works will continue as planned.

For vibration intensive activities that occur within the safe working distances and it has been confirmed that the DIN-4150 cannot be complied with, the following management methods will be adopted:

- Equipment selection and maintenance

Equipment size would be selected taking into account the safe working distances/DIN-4150 criteria. The use of less vibration intensive methods of construction or equipment would be considered where feasible and reasonable when working in proximity to existing structures. Equipment would be maintained and operated in an efficient manner, in accordance with manufacturer's specifications, to reduce the potential for adverse vibration impacts.

- For example: Monitoring will be carried out during hammering near the brewery wall. The strategy of monitoring to the more restrictive 3 mm/s trigger for heritage buildings and the use of smaller plant is an appropriate management measure when working within the safe working distance of 15m. Saw cutting will be performed prior to using a medium excavator with hammer attachment to break out segments furthest from the wall before the remainder are lifted out with a bucket.

- Construction scheduling

Wherever feasible and reasonable, vibration intensive works should be limited to the least sensitive times of the day. These times would be determined based on the outcomes of consultation with relevant sensitive receivers.

If ongoing works are required, where monitoring has confirmed actual vibration levels are nearing the DIN-4150 criteria, a temporary relocatable vibration monitoring system may be considered to warn operators (via flashing light, audible alarm etc) when vibration levels are approaching the cosmetic damage objective.

Additional noise mitigation measures with respect to human response to vibration will be applied in accordance with the CNVG as presented in Table 9.5.

Table 9.5 Additional mitigation measures matrix – construction vibration

Predicted human response vibration levels ³	Additional mitigation measures	
	Type ¹	Apply to ²
Standard hours: Mon - Fri (7am – 6pm), Sat (8am – 1pm), Sun/Pub Hol (Nil)		
Predicted vibration exceeds maximum human comfort levels	V, N, RO	All
Notes: 1. The following abbreviations are used: Alternative Accommodation (AA), Respite Offer (RO), Respite Period 1 (R1), Validation of predicted noise levels (V), Specific Notifications (SN), Notification drops (N), Respite Period 2 (R2), Duration respite (DR) 2. All affected receivers 3. This text has been amended from what is displayed in the CVNG which references an LAeq(15min) noise level		

9.7 Community consultation and complaints handling

Community consultation and complaints handling will be undertaken in accordance with the project's Community Communication Strategy (CCS).

Few complaints were received throughout construction as a result of early stakeholder engagement and ongoing consultation. Managing community expectations has already commenced with project updates of work and expected commencement dates. The adjacent brewery has been contacted directly by the community liaison team with progress updates to follow as work near the boundary starts.

Mitigation measures adopted from the CNVG are detailed in Section 9.5; notifications and complaints will be managed through the project's CCS including 3 monthly updates and specific notification for noisy or out of hours work. Results of monitoring as new work commences or in response to complaints and OOHW will be provided to residents as deemed suitable or on request.

10 Conclusion

EMM has completed a construction noise and vibration impact statement (CNVIS) to review potential noise and vibration impacts from the operation and demobilisation of the Pyrmont Bridge Road tunnel site at Camperdown.

The Site will be extensively mitigated and managed to reduce noise emissions. The mitigation and management applied at site satisfies the reasonable and feasible approach as outlined in the ICNG (EPA 2009) and the requirements of the conditions of approval (CoA).

This CNVIS assesses noise levels from the following stages:

- Stage 1 – Worst case scenario for tunnel backfilling inside acoustic shed, vent building removal and site office setup outside acoustic shed.
- Stages 2-5 – Worst case site demobilisation activities including removal of the acoustic shed, removal of site fixtures, site clearing and concreting.

All proposed works are for standard daytime construction hours only, with no out-of-hours works proposed.

All stages of the demobilisation have predicted exceedances of NMLs at multiple receiver locations. Stage 3 predictions indicate the potential for the highest number of locations to exceed NMLs, with 72 predicted exceedances and two predictions that exceed the ICNG's highly affected noise level of 75 dB. Stage 3 also has one exceedance in the 20 dB and greater category. This is due to the demolition works that will take place in Stage 3 that must happen after the acoustic shed has been removed. All other stages are predicted to have significantly less impact.

When comparing the EIS impacts to this CNVIS's Stage 3, 30 more receivers were predicted to be impacted in the EIS assessment. Nevertheless, all works are proposed to be completed during standard daytime hours only and will be for a limited period of time.

The Site will not operate during the night-time period (10pm to 7am). Therefore, the assessment of potential sleep disturbance at residences is not required.

An assessment of construction vibration was conducted, with a number of premises inside safe working distances noted. Construction management and mitigation measures are recommended.

Additional mitigation measures in line with the CNVG have been recommended for each stage assessed.

Appendix A

Plant and equipment sound power levels – Stages 1-5

Table A.1 Description of scenarios – Stages 1-5

Scenario	Description	Equipment	Item sound power level ⁴		Equipment quantity per assessment period (% utilisation per 15 minutes where shown) ²					Physical noise mitigation	
			L _{Aeq, 15min}	L _{Amax}	MS	D(s)	Day (o)	E	ES		
Stage 1	Tunnel backfill (inside acoustic shed). Vent building removal / site office setup (outside shed).	Moxy	109			3					Acoustic shed remains, hoarding will remain in place on perimeter.
		Spoil truck delivery	103			3					
		Front end loader	110			1					
		Excavator	104			1					
		Bobcat	102			1					
		Mobile crane	98			1					
		EWP	97			2					
		Truck	105			1					
Stage 2	Shed demo/office demob	Mobile crane	98			2					Acoustic shed now removed, hoarding will remain in place on perimeter.
		Delivery truck	105			2					
		EWP	97			2					
		Excavators with shears	111			2					
Stage 3	Demo pavement, remove tanks/services	Rockhammer	122			2					Hoarding will remain in place on perimeter.
		Excavator	104			2					
		Pulverizer	113			1					
	Demo deck slab, retaining walls etc at decline	Concrete Saw	120			1					
		Trucks for loadout	105			2					

Table A.1 Description of scenarios – Stages 1-5

Scenario	Description	Equipment	Item sound power level ⁴		Equipment quantity per assessment period (% utilisation per 15 minutes where shown) ²					Physical noise mitigation	
			L _{Aeq, 15min}	L _{Amax}	MS	D(s)	Day (o)	E	ES	N	
Stage 4	Remove HV/LV switchyard and reinstating Bignell to the original route	Excavator	104		3						Hoarding will remain in place on perimeter.
		Positrack	100		1						
		Pavement machine	105		1						
		Vibratory roller	114		1						
		Vac truck	110		1						
		Agi for kerbing	106		1						
Stage 5	Level site and chipseal (deckslab and switchyard area)	Dozer	111		1						Hoarding will remain in place on perimeter.
		Vibratory roller	114		1						
		Excavator	104		1						
		Delivery trucks	105		1						
		Spray seal truck and bogie	107		1						

Notes: MS = morning shoulder, Day(s) = day standard hours; Day(o) = day out of hours; E = evening; N = night; ES = evening shoulder.

1. Sound power level does not include the attenuation provided by the workshop enclosure, as applicable.

2. Utilisation indicates the percentage of time a piece of equipment will be used per 15 minutes. When combined with all other plant assumed to operate simultaneously, this approach is representative of typical activities.

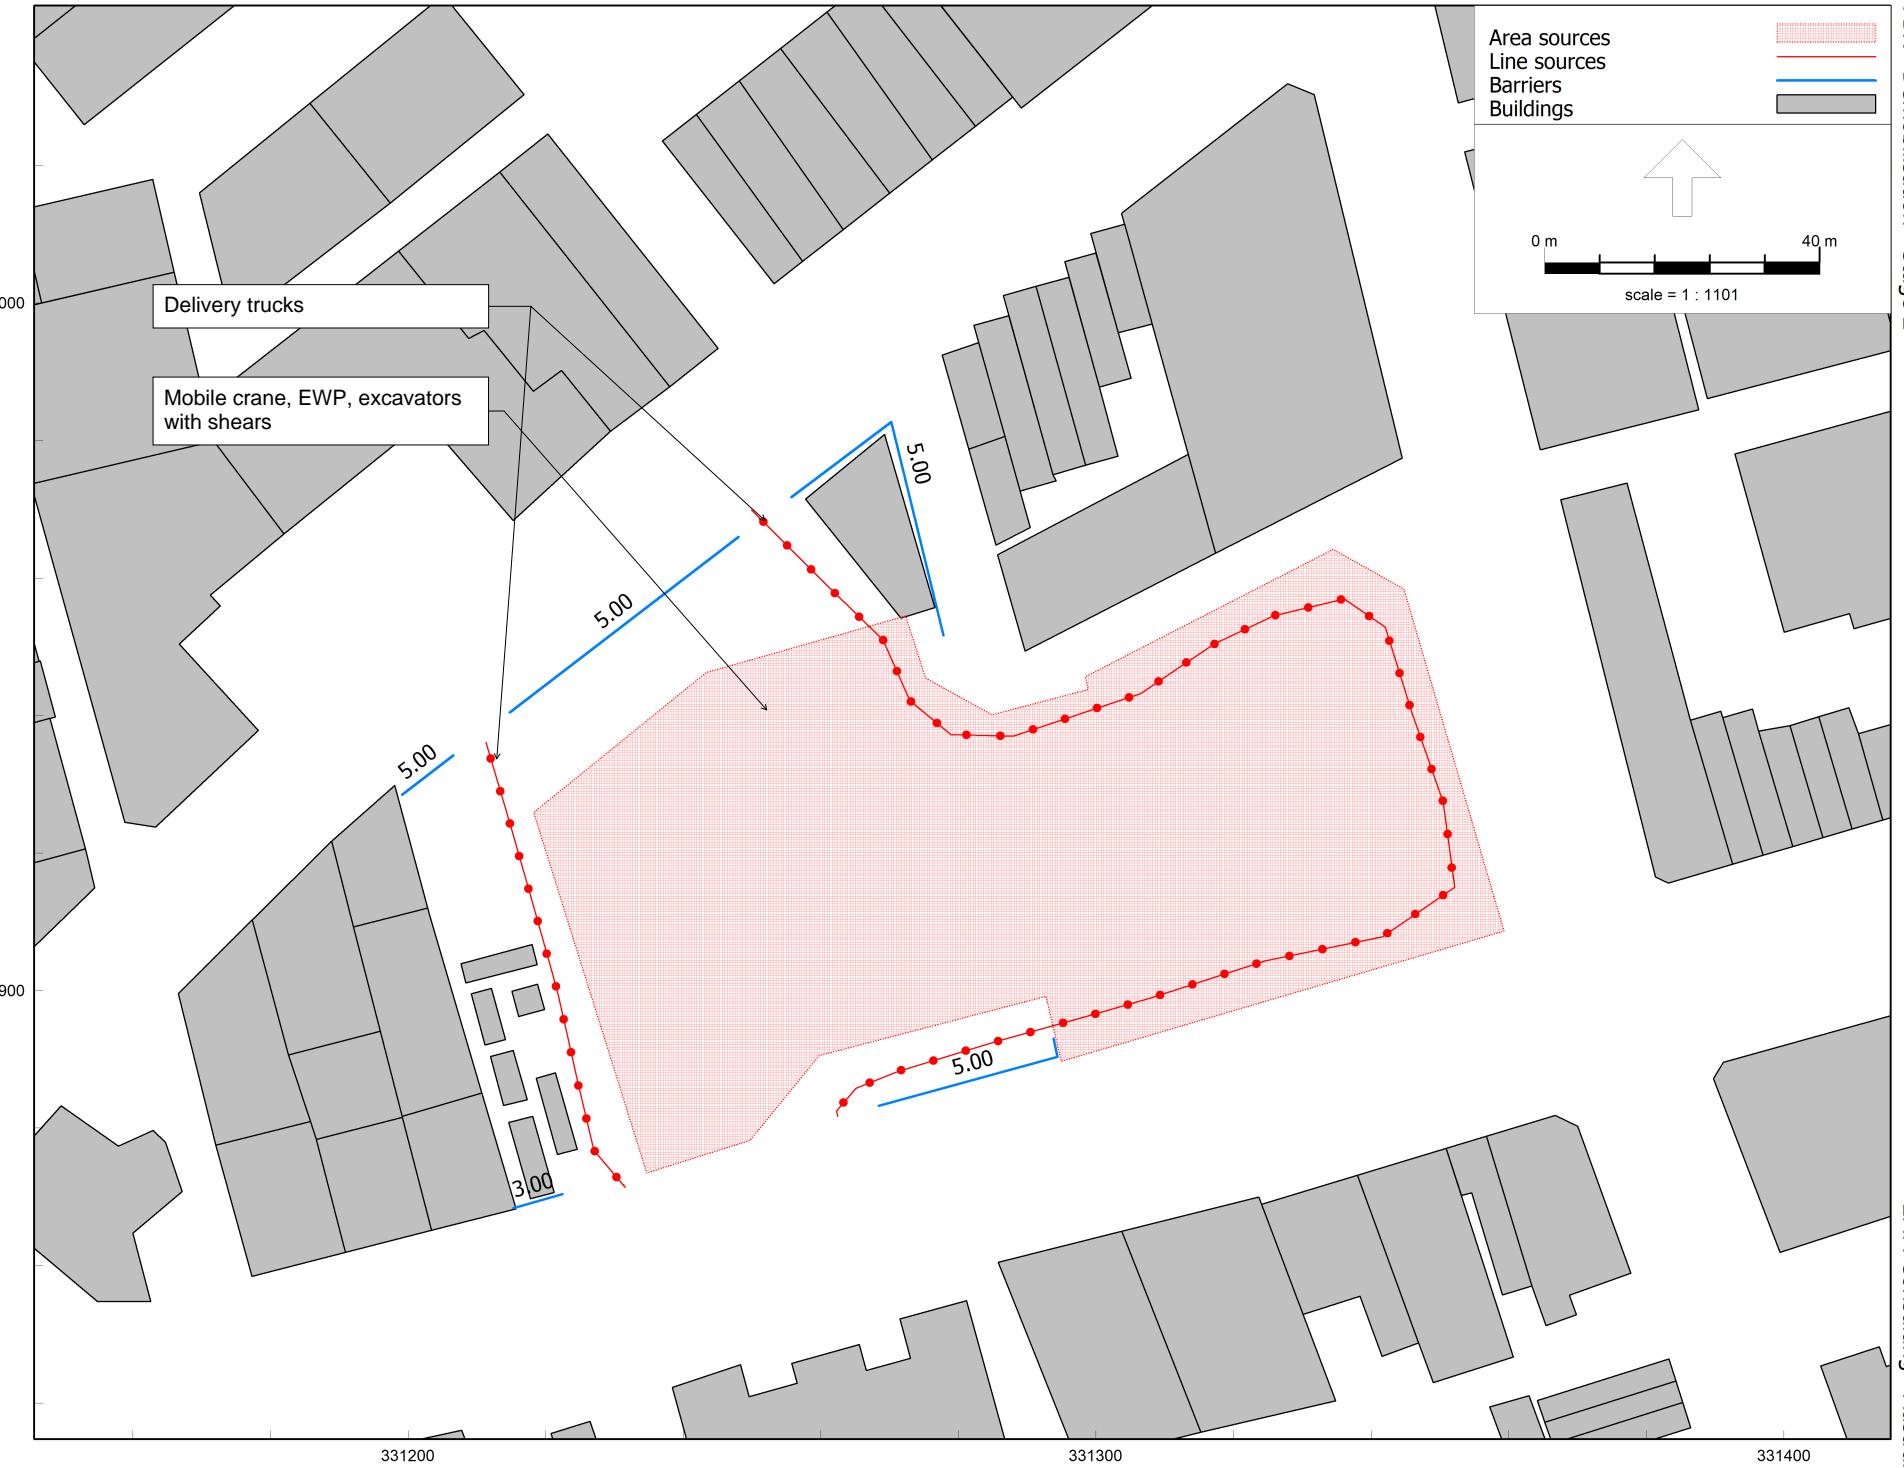

3. L_{Amax} noise level based on attended measurements of concrete agitators entering/leaving site at max 10km/h, conducted 14 May 2020

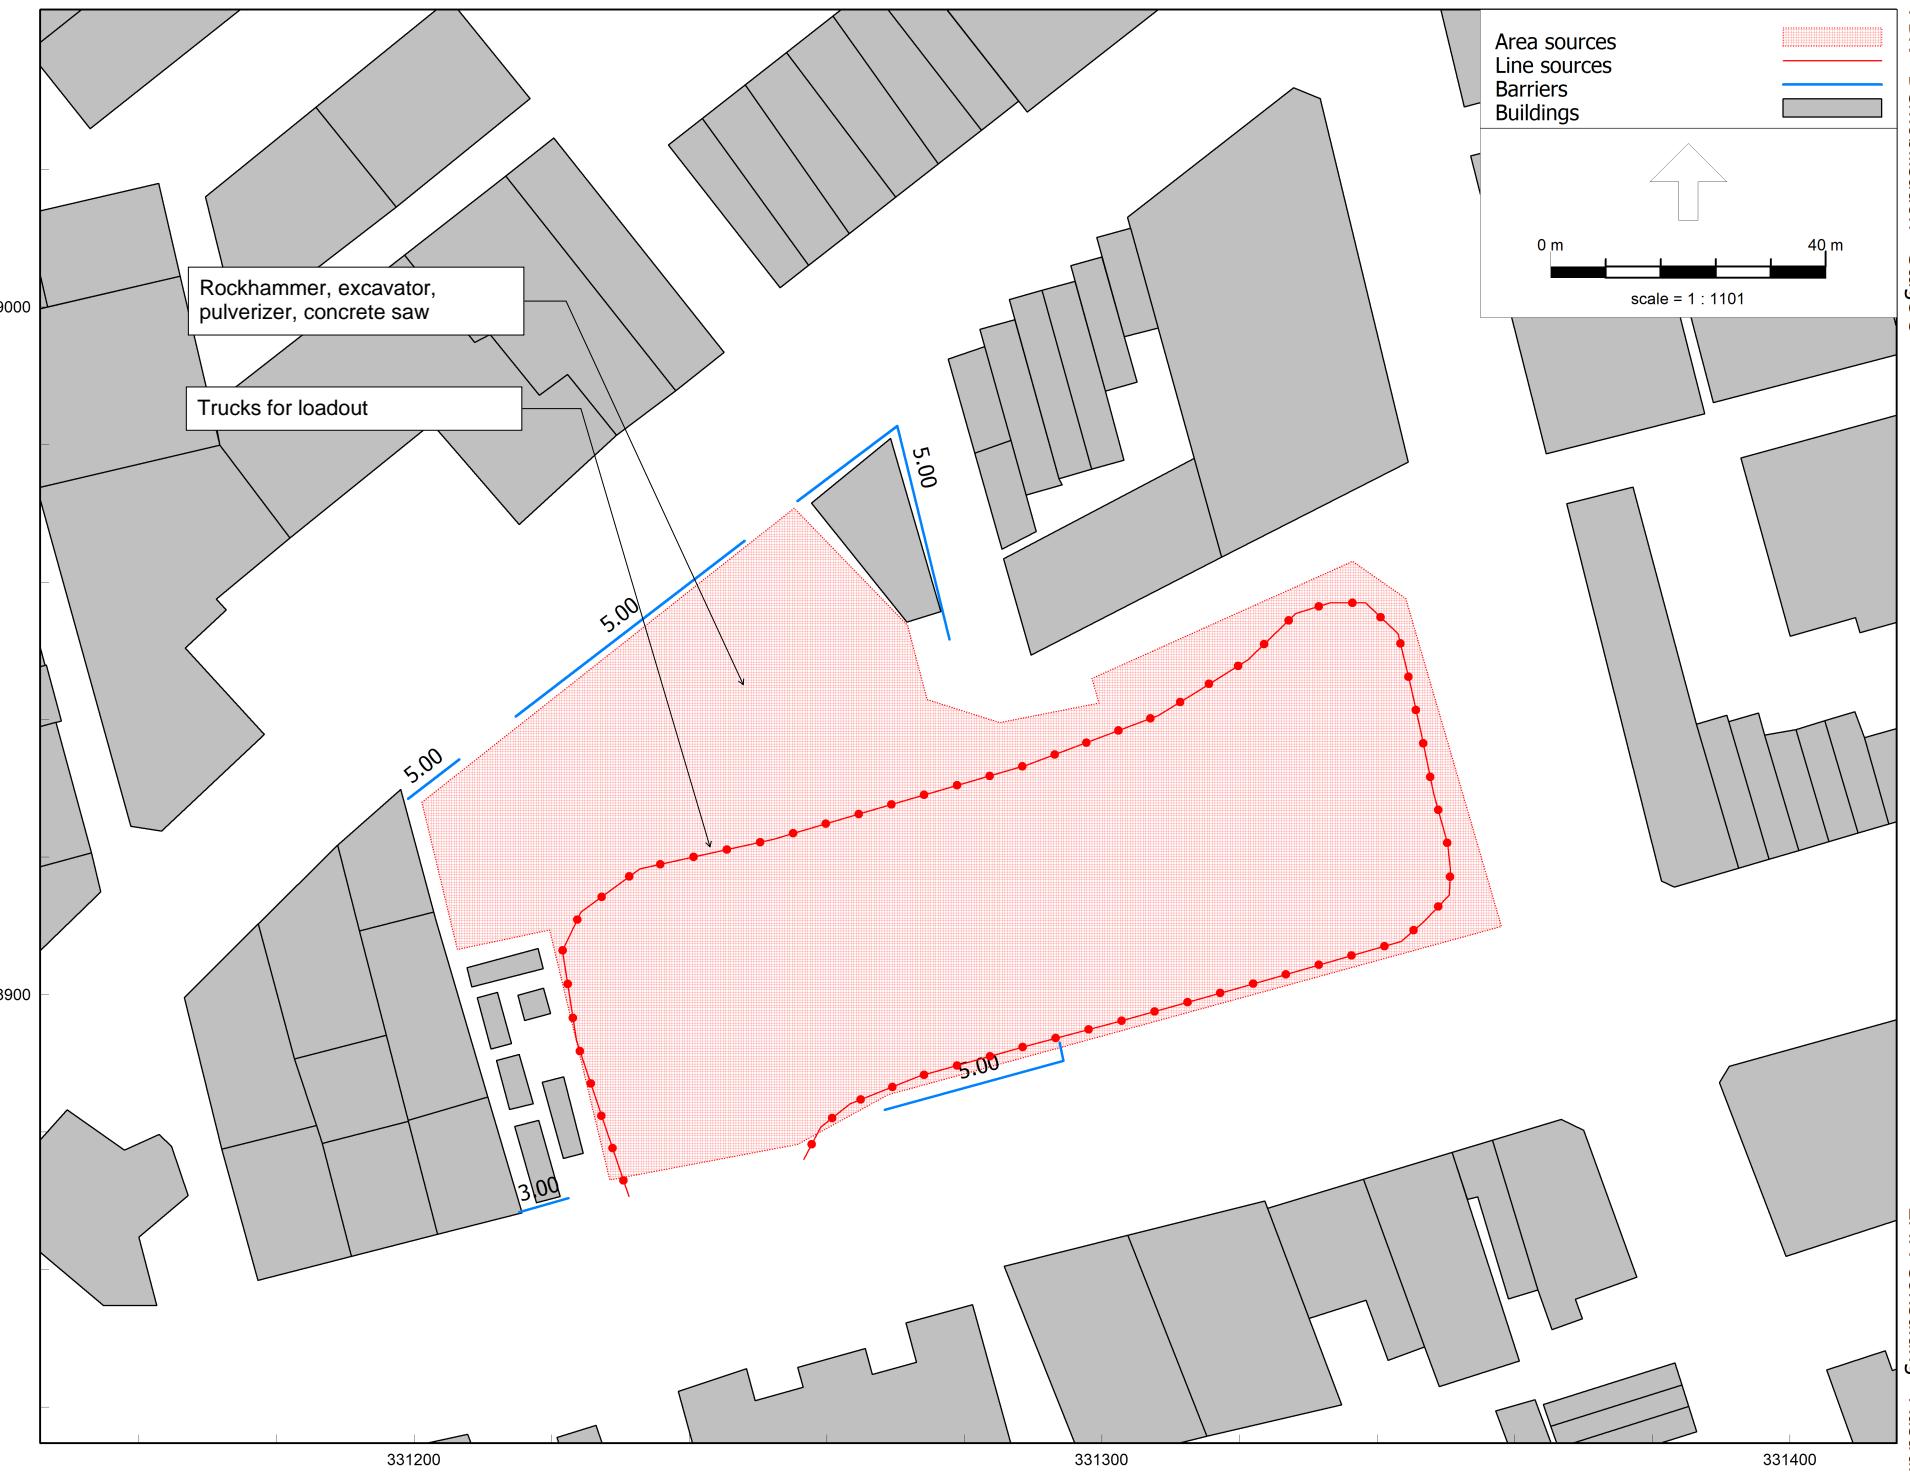

4. Item sound power levels sourced from Department for Environment, Food & Rural Affairs UK (DEFRA), TfNSW databases or EMM measurements.
